***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a method for real-time online search processing over inter-connected computer networks, by way of a wireless handheld device client that is enabled for Java 2 Micro Edition-like applications, classified in class 705, subclass 26.
- II. Claims 8-13, drawn to a method for real-time online search processing over inter-connected computer networks of shopping requests received from a wireless handheld client, classified in class 705, subclass 26.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as vendor descriptions that are automatically constructed through an inductive learning method wherein the inductive learning method can work in multilingual environments.

See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 3625

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
